

AGUAJE
Brand: ProLab
Pharmaceutical Form: Capsules
Presentation: Bottle with 100 capsules

COMPOSITION:

Each Aguaje capsule contains 500 mg of pure Aguaje extract, known for its high concentration of natural phytohormones, antioxidants and vitamins A and C, which help balance the female hormonal system, improving the health of the skin, hair and nails. In addition, it contains 50 mg of hydrolyzed collagen, an essential protein for maintaining the elasticity and firmness of the skin, as well as for the support of joints and connective tissues.

Aguaje, also called "the fruit of femininity", is especially valued for its ability to promote estrogen synthesis, being an ideal supplement for women seeking to balance their hormonal levels, especially during phases such as menopause, or for those who wish to improve their general well-being.

THERAPEUTIC INDICATIONS:

Aguaje is mainly indicated for women seeking to take advantage of the natural benefits of Aguaje and Collagen to improve their physical appearance and hormonal well-being. This product is ideal for those who wish to:

Boost the growth and strengthening of hair and nails.

Improve the elasticity and youthful appearance of the skin.

Regulate and balance the female hormonal system, especially during periods of hormonal imbalance such as menopause or premenstrual syndrome.

Improve joint health and prevent the deterioration of connective tissues thanks to the contribution of Collagen.

The consumption of Aguaje with Collagen can also be useful for athletes seeking to maintain the health of their joints while promoting better muscle recovery and body aesthetics.

RECOMMENDED DOSAGE:

The standard recommended dosage is 2 capsules daily, one in the morning and one in the afternoon, preferably with meals to improve absorption. This regimen ensures a constant supply of phytohormones and collagen in the body.

In women seeking a more noticeable effect in improving their hormonal balance or in the appearance of their skin, hair and nails, the dosage can be increased up to 3 capsules daily, always under professional supervision to assess the individual response of the body.

ADMINISTRATION MODE:

Aguaje capsules should be taken orally, accompanied by sufficient water to facilitate digestion and absorption. It is recommended to take them with meals, as this can improve the bioavailability of nutrients and active components, especially Collagen, which is better metabolized when combined with foods rich in vitamin C.

To obtain the maximum benefits of Aguaje, continuous use for at least 8 to 12 weeks is suggested, although some women may begin to notice improvements in skin and hair health in just a few weeks.

CONTRAINDICATIONS:

Aguaje is contraindicated in people with known hypersensitivity to any of the components, as well as in pregnant or breastfeeding women, except under the supervision and authorization of a doctor. People with hormonal conditions or under hormone treatment should consult their doctor before consuming this product.

Those with a history of liver or kidney disease or any serious health condition should avoid use without proper evaluation by a professional.
