

TESTO MAX  
Brand: ProLab  
Pharmaceutical Form: Capsules  
Presentation: Bottle with 30 capsules

#### COMPOSITION:

Each Testo Max capsule contains a synergistic blend of natural ingredients designed to boost testosterone production and improve male vitality. These ingredients not only contribute to improved sexual performance, but also support overall health, hormonal balance, and physical well-being. The formula is specially designed for men looking to optimize their performance in multiple areas of their life.

Magnesium: 450 mg  
L-Arginine: 150 mg  
Mucuna pruriens seed extract: 100 mg  
Saw Palmetto berries: 100 mg  
Damiana leaf: 50 mg  
Cnidium monnieri: 30 mg  
Huanarpo: 50 mg  
Black maca: 50 mg

#### THERAPEUTIC INDICATIONS:

Testo Max is indicated for men looking to improve their sexual health, increase testosterone production, and optimize their physical and mental performance. It is recommended for those experiencing fatigue, decreased sexual desire, or age-related low testosterone levels. It is also useful for supporting reproductive function and improving overall vitality.

#### RECOMMENDED DOSAGE:

The recommended dosage of Testo Max is 2 capsules per day, preferably with meals, to ensure better absorption of the ingredients. This regimen provides a balanced and constant intake of the active nutrients, helping to maintain stable levels of energy, libido, and general well-being.

For users looking for more potent effects, the dosage can be increased to 3 capsules per day, always under the supervision of a health professional. It is not recommended to exceed this amount.

#### ADMINISTRATION MODE:

Testo Max should be taken with an adequate amount of liquid, preferably accompanied by a meal to improve the bioavailability of the ingredients. To achieve better sexual and physical performance, it is ideal to follow a consistent regimen for at least 4 to 8 weeks, with possible 1 to 2 week rest cycles to prevent desensitization of hormone receptors.

#### CONTRAINDICATIONS:

Testo Max is contraindicated in people with allergies to any of the components of the formula. It is also not recommended for use in men with a history of uncontrolled hypertension, serious heart or kidney problems, or those who are taking medications for the treatment of hormonal or sexual dysfunctions without a doctor's approval.

It should not be used in pregnant or breastfeeding women, or in people under 18 years of age.
